If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

The closest prior art, WO 93/11747 directed to Schultz, teaches a suspension aerosol composition that is free of surfactant, and consisting essentially of ethanol, albuterol sulfate (salbutamol sulfate), and a fluorocarbon propellant. Schultz does not teach a canister with a metering valve, and an actuator with a spray orifice aperture having diameter of from 100 to 300  $\mu\text{m}$ . Schultz et al. US 5,899,201 (Schultz '201) teaches an actuator for use in connection with medicinal aerosol formulations. The actuator has a spray orifice diameter from about 0.25 mm to 0.64 mm. Schultz '201, however, teaches that suspension aerosol formulations are used in connection with an actuator having wider orifice diameter (column 4, lines 1-8). Table 1 in Schultz '201 indicates that standard suspension actuator having an exit orifice diameter of 0.56 mm, and a standard solution actuator having an exit orifice diameter of 0.254 mm were tested with a solution aerosol formulation. The present invention requires that the aerosol formulation is a suspension not a solution. The present specification shows that by reducing the aperture to between 100-300  $\mu\text{m}$  gives more rapid evaporation of the ethanol.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Claims 46-65 are allowed.

***Pertinent Arts***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. McNally et al. is cited as of interest for the teachings of a solution aerosol formulation that is administered through an actuator having an orifice diameter of about 0.25 mm. This solution aerosol formulation exhibits suitable stability yet eliminates problems associates with suspension aerosol formulations.
